                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence:
pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IDENTITY_NUC

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of developing a haematologic malignancy or multidrug resistance (MRR).

CC The method involves administering hypoxia inducible factor-1 (HRF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding complex modulators. mdr1-hypoxia responsive celement (HRE) binding molecules or antisense mucleic acid molecules and SUMO-1 binding molecules or antisense mucleic acid molecules and cc subject having or at risk of developing haematologic malignancy or MDR ce.g. a lymphoid disorder or a mysloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders ce.g. lymphoma, myeloma or chronic hymphoid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is human mdr1 complex of the myeloid site of the present sequence is human mdr1 cross of the myeloid site of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The lymphoid disorders include lymphocytic leukaemia or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is an antisense oligo targetted to HRE in the mdr1 gene (mdr1-HRE) to inhibit its expression. This oligo is used in the exemplification of the invention
                                                                                    Novel nucleic acid sequence,
tumor involved genes, useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of treating a subject having or at a of developing a haemacologic malignancy or multidary resistance (MDR). The method involves administering hypoxia inducible factor-1 (HIF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or HIF-1-SUMO-1 complex modulators. mdrl-hypoxia responsive
                                                                                                                                                                                                                 WPI; 2002-635679/68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cDNA encoding tumour involved gene (TIG) splice variant, NV-31.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-NOV-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABS65230

AC AAQ ફ 뭉 The invention discloses isolated human nucleic acid alternative splicing CC variants that are all tumour-involved genes (TIGs). The nucleic acids and CC polypeptides are useful for determining the level of a nucleic acid or CC polypeptide in a biological sample, for detecting a variant nucleic acid or polypeptide in a biological sample, for detecting a variant nucleic acid or polypeptide sequence in a biological sample, for detecting a variant sequence in a for determining the level of variant sequence in a biological sample and the level of the variant sequence in a first biological sample and the level of the original sequence in a biological sample and for raising antibodies. A pharmaceutical composition comprising a carrier and the nucleic acid, is useful for increasing or decreasing the level of the emoletic acid, is useful for cardes are also useful for diagnostic purposes, especially for detecting cancer or a predisposition to cancer, for evaluating the state or cagraesiveness of cancer disease, in basic research, for understanding the physiological function of the original TIG, in targeting or cayled for the same type of cells which may be helpful for the development company. The polypeptides are useful for identifying compounds capable of binding to the variant product and modulating its activity and for modulate apoptosis either ex vivo or in vivo. The sequences presented in capacity and experiments of the coding sequences for the new variants (NV) 1-36 of the TIGs disclosed Matches Query Match Sequence 2307 Claim 1; Page 60-61; 180pp; English Multidrug-resistance AAQ70907; AAQ70907 standard; Synthetic Multidrug-resistance; MDR-1 gene; 25-MAR-2003 27-MAR-1995 04-AUG-1994 WO9417206-A1 WPI; 1994-264118/32.                                                                                                                      á
                                                                                                                                                                                                                                                                          This sequence represents the multidrug resistance gene (MDR-1) amplified CC by the primers shown in AAT43320 and AAT3321. This sequence can be used CC as a target in the method of the invention, for enzymatically amplifying CC a target nucleic acid (TWA) sequence contained in a nucleic acid or comprises using three primers, one complementary CC polymerase. The method comprises using three primers, one complementary CC of the TWA, which is adjacent to the first primer, and a third which is similar to the first segment of the TWA, and is complementary to a good segment of the TWA, and a fused amplification product is created from the TWA using CC these two primers. The first two primers are hybridised to the TWA, and a fused amplification product is dissociated, and hybridised to the third primer, which is then extended. The extended modified camplification product is hybridised to the first two primers, and these CC amplification product is hybridised to the first two primers, and these CC different label so that the method can be used to detect the presence of a mutation or allele by detecting whether the labelled primer is CC contained within the fused amplification product or the extended camplification product. The method of the invention combines certain CC (PCR), but is improved compared to LCR due to the reduced number of primers needed, and the fact that the entire TWA sequence does not need contained within the fact that the entire TWA sequence does not need to be primers needed, and the fact that the entire TWA sequence does not need to be primers to the sequence of the primers needed.
                                                                                                                                                                          Query Match

```
cc as agonists, antagonists, antibodies, expression vectors and host cells, cin appropriate screening and toxicity assays to assess the effects of cexogenous compounds on TRICH expression. The present invention describes TRICH compositions that are useful in the diagnosts, treatment and prevention of various disorders such as cell proliferative (e.g. arteriosclerosis, cancer), autoimmune/inflammatory (e.g. ADDS, asthma), cc arteriosclerosis, cancer), autoimmune/inflammatory (e.g. Cushing's eyndrome hypothyroidism) and for infections. Accordingly, these TRICH comolecules can be used for gene therapy purposes and exhibit various activities such as cytostatic, antiinflammatory, immunosuppressive. Cantiasthmatic, anticonvulsant, nootropic and neveroprotective. Gurthermore, a microarray is useful in monitoring or measuring protein-protein interactions, drug-target interactions and gene expression treasting. This polynucleotide sequence is a human TRICH cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to novel isolated polynucleotides identified as human transporters and ion channels (TRICH), and the encoded polypeptides thereof. Specifically, it describes using these TRICH molecules, as well
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-MAY-2002; 2002US-0377435P-

                                                                                                                                                                                                                                                                                                    The invention relates to inhibiting expression of a target gene (I) in a cell by introducing an inhibitory RNA (dsRNA1) having a double-stranded structure of at most 49 consecutive bases. At least part of one strand (asl) of dsRNA1 is complementary to (I) and at least one end of dsRNA1 has an overhang of 1-4 nucleotides. The method is used to inhibit the expression of a wide range of genes, e.g. oncogenes, cytokine genes etc. in humans, also genes in Plasmodium or in viruses or viroids that are pathogenic for humans, animals or plants. Introducing an overhang into dsRNA greatly increases effectiveness for inhibiting gene expression, both in vivo and in vitro and also increases stability and thus the effective concentration inside the cell. The present sequence is that of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inhibiting expression of target gene, useful e.g. for inhibiting oncogenes, by administering double-stranded RNA complementary to target and having an overhang.

At least part of one strand (Sl, S2) of the ds structures in each CC for dsRNAI and II are complementary to regions in the target gene. The CC method uses antisense inhibition of gene expression using double stranded CC RNA inhibition (RNAi). The method is particularly used to treat tumours CC or infections, especially by Plasmodium or viruses/viroids (pathogenic on CC humans, animals or plants). The method provides more effective inhibition CC of expression than known methods using a single dsRNA, even at very low CC concentrations. When dsRNA has at least one unpaired nucleotide at the CC end, stability (and thus effective concentration in the cell) is improved interferon. The present sequence is that of a target DNA of the invention or content the concentration in the cells with the concentration in the cells with concentration in the cells with concentration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The method is used to inhibit expression of target genes, particularly oncogenes, cytokine genes, Id (not defined) protein genes; developmental or prion genes, or genes expressed in pathogenic organisms (particularly plasmodia) or in viruses or virolds (pathogenic in humans, animals or plants). Treating the cells with interferon greatly increases the extent to which dsRNA can inhibit expression of the target genes, and the effect is even greater when dsRNA are modified to increase their stability. ABX09936-ABX10075 represent gene fragments used to illustrate the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for inhibiting expression of a target gene (ABL91658-ABL91797) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, Id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang increases stability and thus intracellular concentration

The method is used for the presumption of the side effect of an immunosuppressant. The present sequence is that of the MDR1 encoding cDNA of the investigated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Macaca mulatta

P-glycoprotein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rhesus monkey P-glycoprotein coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    03-APR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABT14496
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3843 BP; 1129
                                                                                                                                                                                                                                                                       The invention comprises the amino acid and coding sequence of a rhesus monkey (Macaca mulatta) P-glycoprotein and related P-glycoproteins. The DNA and protein sequences of the invention are useful in assays for evaluating the bioavailability of drugs, as well as the optimisation or discovery of drugs for the treatment of disease associated with P-glycoprotein transporter activity. The present cDNA sequence encodes the Rhesus monkey P-glycoprotein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecule encoding a P-glycoprotein of monkey, useful in assays for evaluating bioavailability of as for the optimization or discovery of drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-MAR-2001; 2001US-0277095P

                                                                               cc This invention relates to novel isolated polynucleotides identified as common transporters and ion channels (TRICH), and the encoded polypeptides thereof. Specifically, it describes using these TRICH molecules, as well cas agonists, antagonists, antibodies, expression vectors and host cells, in appropriate screening and toxicity assays to assess the effects of carterioscompounds on TRICH expression. The present invention describes TRICH compositions that are useful in the diagnosis, treatment and carterioscompounds of the carterioscompounds of the carterion as cell proliferative (e.g. arteriosclerosis, cancer), autoimmune/inflammatory (e.g. ALDS, asthma), carterioscompounds of the carterions accordingly, these TRICH compositions and for infections. Accordingly, these TRICH conjectures such as cytostatic, antinflammatory, immunosuppressive, cativities such as cytostatic, antinflammatory, immunosuppressive, contributed to a microarray is useful in monitoring or measuring proteingroties. This polymucleotide sequence is a human TRICH cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-MAY-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
CC This sequence represents cDNA encoding human wild-type multidrug CC responsible for the export of drugs from cells, particularly cancer cells. Wild-type MDR-1 shows increased resistance to etoposide and CC decreased resistance to vinca alkaloide. compared with a mutant form CC (AAYS6187) where the Gly at position 185 is replaced by Val. The CC invention relates to transducing haematopoietic stem cells with nucleic conditied haematopoietic stem cells are useful in bone marrow conditied haematopoietic stem cells are useful in bone marrow transplantation (to reconstitute haematopoietic systems in patients who can be undergone chemotherapy or radiation therapy) and in ex vivo gene convertible, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells that express MDR-1 will be protected against chemotherapy. Expansion of (rare) comparated while the patient is undergoing chemotherapy. Expansion of (rare) comparated biochemical analysis. Overexpression of MDR-1 allows cytokine-driven
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Multidrug resistance; MDR-1; P-glycoprotein; transmembrane efflux pump; haematopoietic stem cell; transduction; bone marrow transplantation; chemotherapy; radiation therapy; cancer; gene therapy; gene replacement genetic defect; thalassaemia; Gauchier's disease; sickle cell anaemia; leukaemia; ex vivo expansion; cytokine; wild-type; ds.

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                     DB seq
